Disposal opening for two-wheeled container

Product specifications

Article number	99.INW.1

Properties

- **Essential component of the design that enhances functionality and user-friendliness.**
- **Strategically placed on the lid for easy and organized waste disposal.**
- **Optimal size and shape facilitate the deposition of various types of waste.**
- **Prevents unintentional disposal of larger items.**
- **Efficient waste removal, streamlining the emptying process of the container.**
- **Contributes to cleaner and more hygienic waste management.**
- **Durable plastic construction ensures long lifespan and minimizes maintenance requirements.**

Description

The inlet opening in the lid of a 2-wheel plastic waste container is an essential part of the design that enhances the functionality and user-friendliness of the container. This opening, strategically placed on the lid, provides an easy and organized way to deposit waste into the container. With an optimal size and shape, the inlet opening makes it easy to throw various types of waste into the container while also preventing larger items from being inadvertently discarded. It ensures efficient waste disposal, streamlining the process of emptying the container for both households and businesses.
