H1-F Euro fish pallet - 1200 x 800 mm - with raised edges for Euro fish boxes - 3 closed pallet skids - orange

Product specifications

External dimensions (L x W x H)	1200 × 800 × 160 mm
Dynamic load capacity	1250 kg
Material	HDPE
Article number	83101012
Weight (kg)	18 kg
Temperature range	-30°C to +40°C, briefly up to +90°C
Color	Orange
Static load capacity	5000 kg
Edge height	7 mm
Load capacity in racks	1000
Quantity per pallet	15

Properties

- **Hygienic fish pallet in Euro format 1200 x 800 mm**
- **For efficient logistics and optimal use of space during storage**
- **With 7 mm raised edges on the pallet deck for securely positioning Euro fish boxes (800 x 400 mm) and Euro fillet boxes (600 x 400 mm)**
- **With continuous openings in the pallet deck for ventilation and drainage of meltwater and other liquids**
- **With a completely closed and smooth underside of the pallet skids, helping to prevent dirt from the floor from adhering**
- **Pallet skids and blocks are extremely robust for a long service life**
- **Thanks to its flat underside, the H1-F runs smoothly on roller conveyors and is also gentle on warehouse floors**
- **Options: printing - higher edges (12 mm) - logos - barcodes or QR codes - Palgrip anti-slip underneath the pallet skids (from 500 pieces)**

Description

Our **H1-F fish pallet** in **Euro format** (1200 x 800 mm) is designed for the logistics of **800 x 400 mm Euro fish boxes** and **600 x 400 mm Euro fillet boxes**. The pallet has an **open deck** for draining rinse water, meltwater and other liquids. The top deck is fitted with **specially adapted centring edges**, designed specifically for our Euro fish boxes and Euro fillet boxes. These centring edges keep the boxes securely positioned on the pallet.

Product details

The **H1-F Euro fish pallet** is a variant of the Euro H1 pallet, the most widely used **hygiene pallet** in Europe. This ensures high product quality and an exceptionally long service life. The H1-F fish pallet is fitted with specially designed centring edges all around, intended to centre our Euro fish boxes (800 x 400 mm) and Euro fillet boxes (600 x 400 mm) securely on the pallet.

This allows pallets loaded with fish boxes to be **transported** safely and efficiently, while the **storage** of this combination of load carriers is also secure - both when loaded with fish and when empty. Openings in the H1-F pallet deck provide ventilation and effective drainage of meltwater and other liquids. The **pallet blocks** and **pallet skids** are completely **smooth and closed** on the underside, helping to prevent dirt from the floor from adhering.

Application

The **H1-F plastic pallets** are mainly used in **fish processing** and the **distribution of fish**. They ensure trouble-free transport and safe storage. Thanks to its Euro format (1200 x 800 mm), the H1-F is an ideal pallet for **logistics** operations that primarily use standardised pallet formats such as Euro and ISO.

Combined with standardised fish boxes measuring 800 x 400 mm and 600 x 400 mm, our Euro fish pallet ensures **optimal use of space** in trucks and during storage.

In short, the H1-F Euro fish pallet is an essential component of efficient logistics for fish and fish products transported in plastic boxes.
