Description

Custom-made coversheets for all roll containers and mobile plastic trolleys, as well as for technical equipment in the rental sector, for example. They are used to optimally protect the contents against dust, dirt and moisture during storage and transport. Made from high-quality 600D polyester, these coversheets are strong, wear-resistant and suitable for long-term use in various working environments. As standard, the coversheets are fitted with two robust plastic zips on one short side. This allows this side to be fully opened. The zips are continuous, meaning they can be opened all the way to the top, allowing quick and easy access to the contents. Usually, the zipped flap is located on the loading side or at the operating side of the contents. The coversheets are available in 11 colours. By using different colours for different products, recognisability can be increased. In addition, it is possible to provide the coversheets with printing - in screen printing or embroidery. All for a professional appearance and optimal logistics.
