Industrial pallet CR3-5 - 1200 x 1000 mm - with 5 skids - with 5 mm raised rims - with anti-slip strips - brown/blue

Product specifications

External dimensions (L x W x H)	1200 × 1000 × 160 mm
Dynamic load capacity	1250 kg
Material	HDPE
Article number	83330701
Weight (kg)	21,5 kg
Temperature range	-30°C to +40°C, briefly up to +90°C
Color	Brown
Static load capacity	5000 kg
Edge height	5 mm
Load capacity in racks	1000
Quantity per pallet	15

Properties

- **Extremely robust pallet for heavy-duty work**
- **Produced in a distinctive reddish-brown colour variant**
- **Equipped with 5 skids - 3 longitudinal and 2 transverse**
- **Underside of the blocks and skids is ribbed - for increased grip in automated storage and conveyor systems**
- **The pallet deck features Palgrip anti-slip strips in all directions**
- **Racking load capacity up to 1,000 kg**
- **Deck fitted with 5 mm raised rims all around**
- **Skids are chamfered on both sides - for easy handling with hand pallet trucks, etc.**
- **Made from high-quality virgin HDPE, offering excellent impact resistance and suitability for deep-freeze applications**
- **Suitable for direct contact with food**
- **Marking, logos and numbering on request; position to be agreed**
- **Options: pallet lid / pallet cover - pallet collars - QR codes and barcodes - RFID transponders - top deck without rims or with 7 mm rims**

Description

The CR3-5 industrial pallet with 5 skids is a robust and versatile plastic pallet for heavy internal and industrial applications - including in the food industry. This pallet is equipped with five skids - three longitudinal and two transverse - making it ideal for automated storage and transport systems. The underside of the skids and the blocks is ribbed, optimising grip in these systems.
This version of the CR3-5 pallet features anti-slip strips on the deck in all directions to centre loads. The deck is not additionally reinforced; however, this pallet variant still offers a respectable racking load capacity of 1,000 kg, which is sufficient in many cases. In addition to the anti-slip, the deck is fitted with 5 mm raised rims all around. This ensures empty pallets are safely centred when stacked - we do not rely on anti-slip alone.
Besides load capacity, impact resistance is also important for a plastic pallet. Naturally, the overall pallet design is key - and the CR3-5 construction is built to handle this well. The plastic material used also plays a major role. That is why this version is made from high-quality virgin HDPE. This is essential for impact resistance as well as temperature resistance. This CR3-5 version can be used in a shock freezer without any issues.
In short, this CR3-5 pallet variant is designed for a very wide range of heavy-duty applications. If certain features are less critical, the CR3-5 is also available in “downsized” versions (3 skids - without anti-slip strips - made from ECO regranulate). The core remains the same: a robust pallet body with excellent performance.
