Description

The Shelving bin 400 x 94 x H 80 mm is designed for users with high demands on their storage system. The bin is intended for use on shelves with a clearance of approx. 90-110 mm, so that the 80 mm Shelving bin fits neatly. The length of the Shelving bin (400 mm) is matched to the most common shelf size. For small items, the Storage bin can easily be divided with cross dividers. The Shelving bin offers sufficient space for the tidy storage of items such as screws, nuts, bolts, wall plugs or electronic components.
The Shelving bin is operated from the top. During use, it is pulled forward out of a rack or shelf. To prevent it from falling out, a recess has been made at the rear of all Shelving bins as a safety stop.
The bin is made of impact-resistant polypropylene (PP), for intensive use and a long service life. The PP plastic used is flexible and therefore low-noise, helping to create a pleasant working environment. Because the plastic is food-grade, the food sector, pharmaceuticals and the chemical industry also make frequent use of this Shelving bin.
